Atlas of Sauger Waters in Ontario

January 2002

Preface

The sauger (*Stizostedion canadense*) is a close relative of the walleye (*Stizostedion vitreum*). Scott and Crossman (1973) describe the range of the sauger in Ontario as "extending from the Ottawa River west across Ontario south of a line from Kesagami Lake (Cochrane District) to Sandy Lake (Kenora District)

This atlas represents one of the first attempts to list Ontario waterbodies which contain sauger. Information was obtained from a search of several provincial databases including lake and stream inventory records as well as netting projects including fall walleye index netting (FWIN). A series of species checklists and fish distribution publications were also reviewed (see References). The initial listing of waters was reviewed and updated by field staff in Ontario Ministry of Natural Resources (MNR) districts across the province.

A total of 228 waterbodies containing sauger were identified (Table 1). Although scattered across Ontario, the majority (~ 80%) of sauger waters are found in the northwestern part of the province.

Table 1. Ontario waterbodies containing sauger. Data has been presented in terms of the Ministry of Natural Resources district in which the waterbody is located.

Several isolated reports of sauger may be suspect due to improper identification or coding errors. Efforts should be made to confirm the status of sauger in these waters.

This listing is undoubtedly incomplete particularly since many northern Ontario waters which probably contain sauger have not yet been inventoried. This atlas should be utilized as a preliminary source of information on the distribution of sauger in Ontario. This listing should be revised when new information becomes available.
