

SNIF REPORT

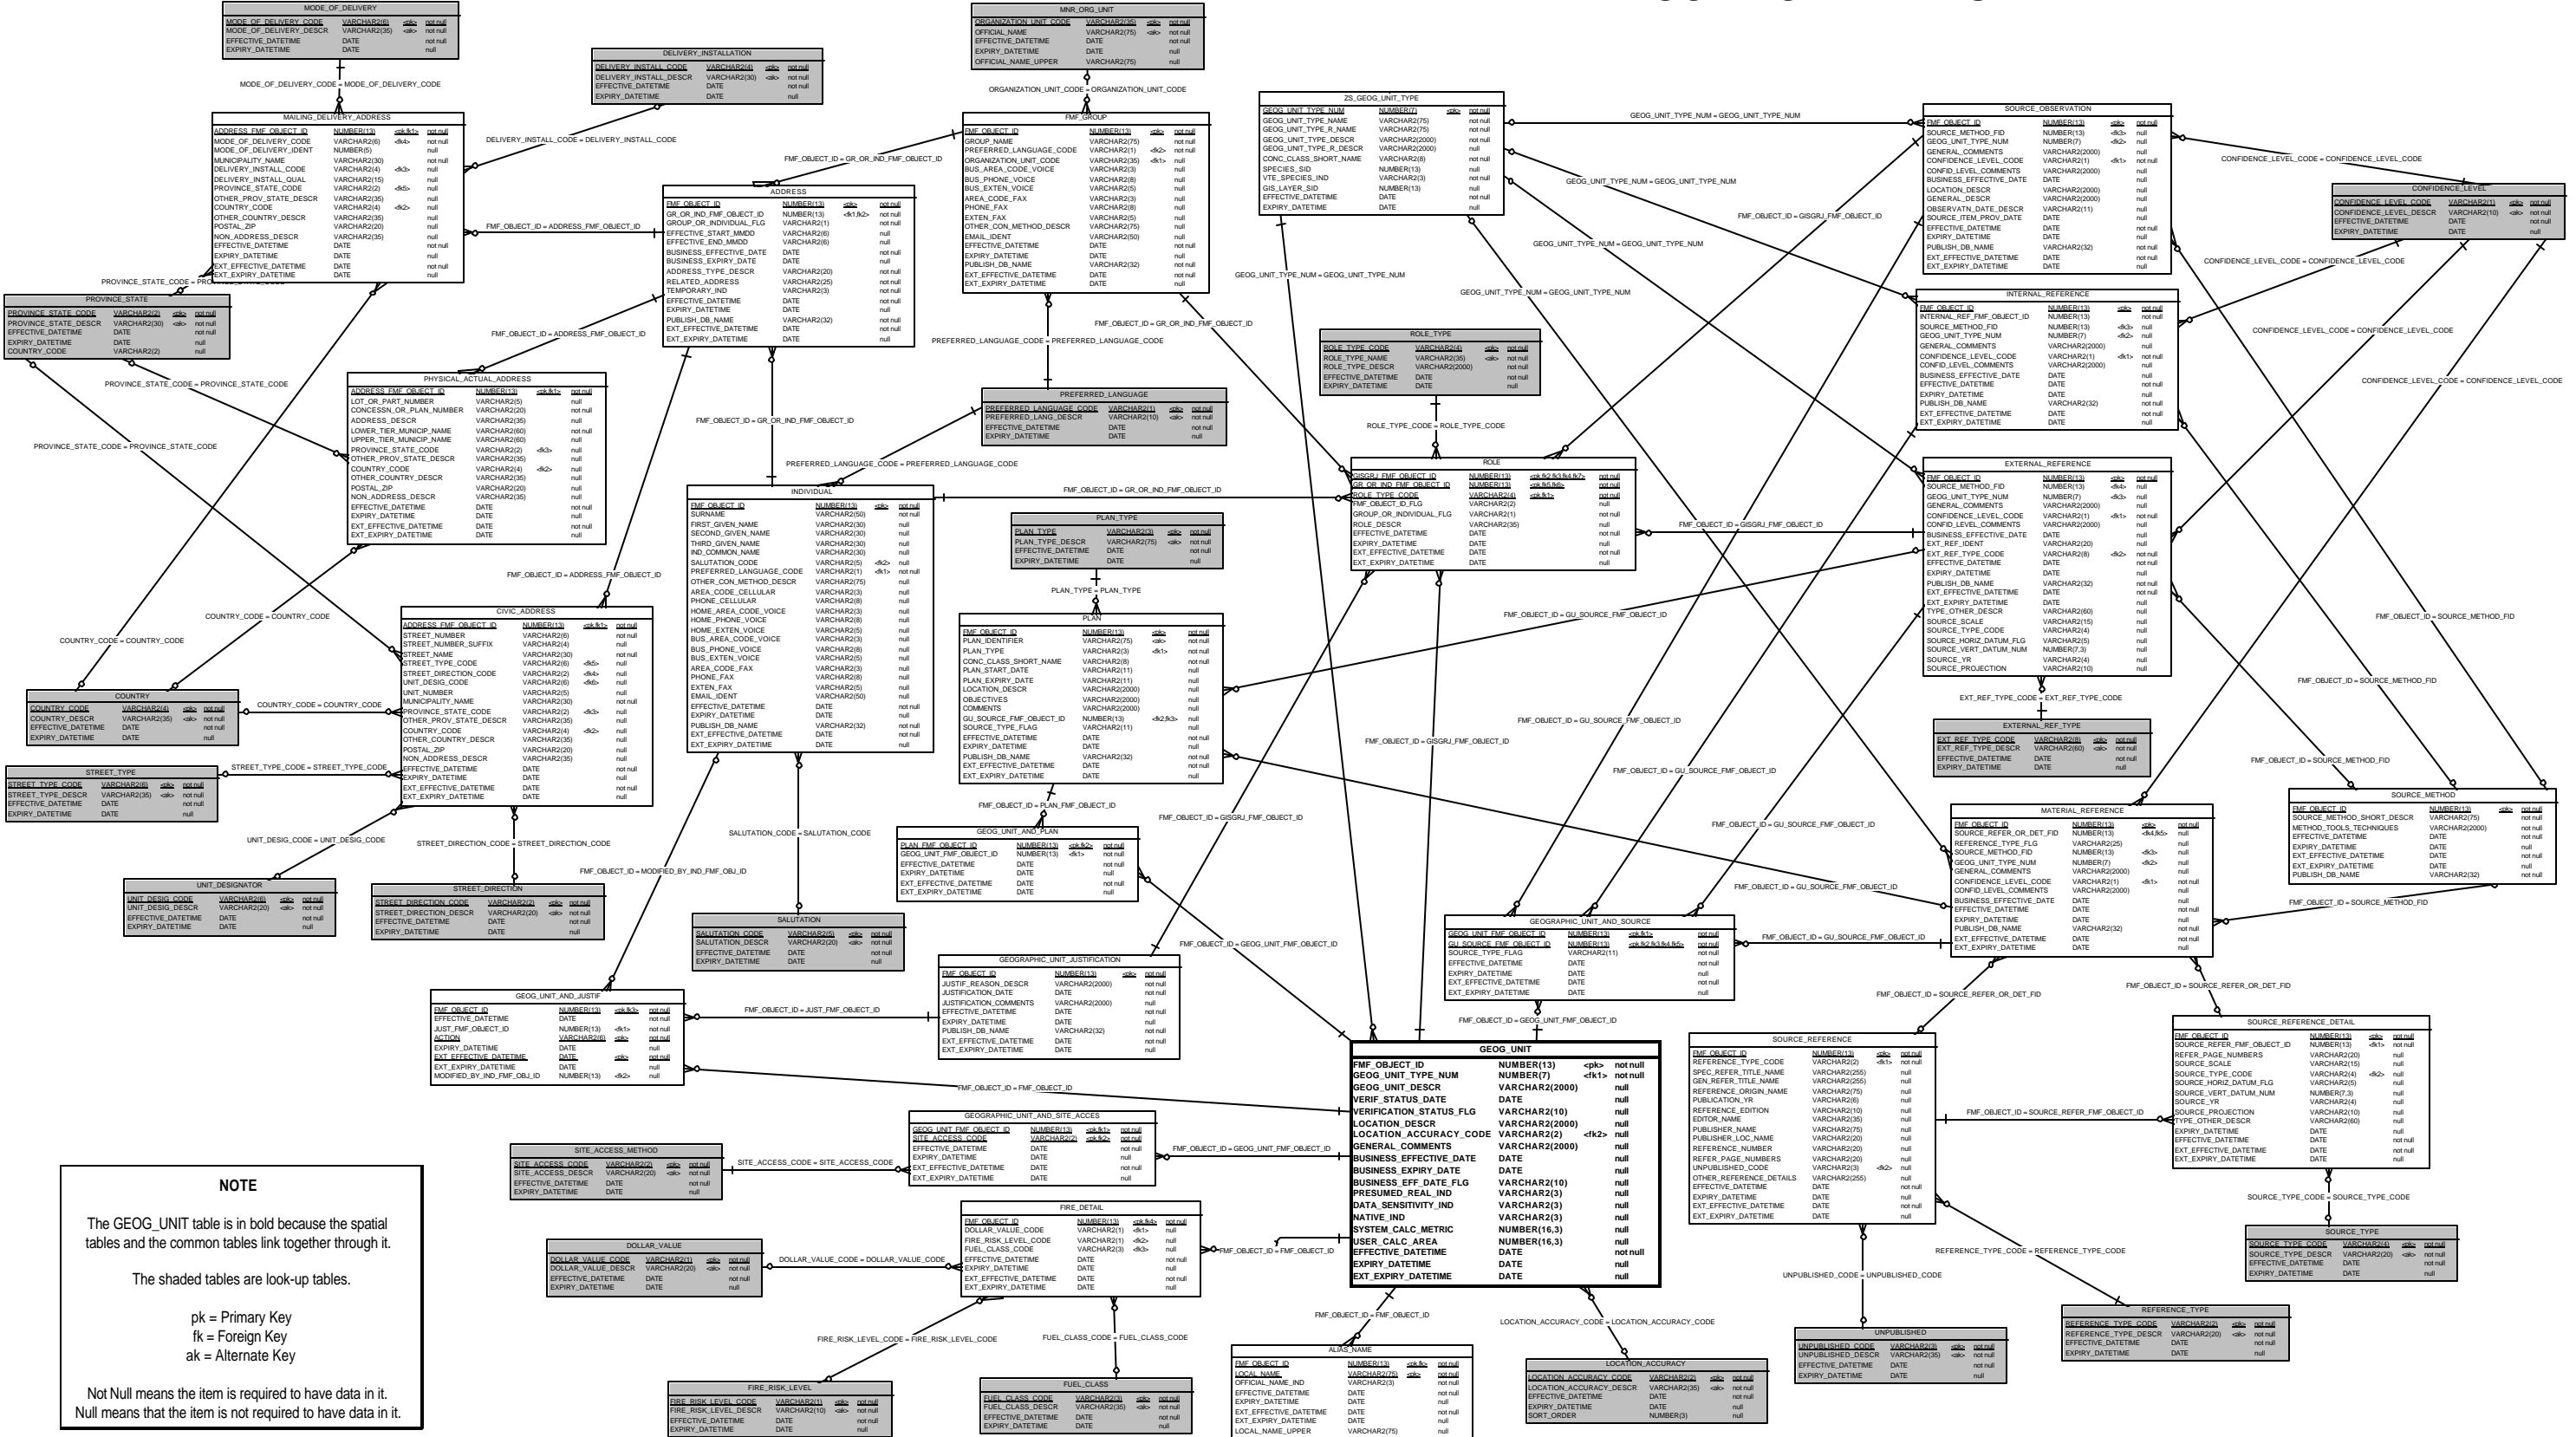

Standard NRVIS Interchange Format Version 2.0 Class Breakdown (LIO Warehouse Release 2)

COMMON TABLES

Note: The date format for Date fields is dd-mmm-yyyy. An example is 09-Mar-2001.

A Common Table is usually a database table that is used by more than one class in the database, and defined as common in the data dictionary. This report outlines all the tables listed in the common directory of a SNIF package. The items present in each table are also listed, along with their specifications for DATA TYPE, MANDATORY and DEFAULT values. Tables that are listed as OPTIONAL may not necessarily be included in the snif package. The table relationship diagram on the following page clarifies the connection between the common tables and class specific tables in the spatial directory of the SNIF package. The GEOG_UNIT table on the diagram is bolded to show that the spatial and common tables link together through it. Each SNIF report describes the table structure for each data class in the OLIW. A report can be used to assist in understanding the data recieved in SNIF package, as well the report is essential for SNIF package creation for a single data

EXPIRED VALUES	(23)NRVIS 2.0 Data Conversion	

10	EFFECTIVE_DATETIME	DATE	Yes	System Effective Date
	Date that the record becomes effective. I.e. date that the record becomes a part of the database.			
11	EXPIRY_DATETIME	DATE	No	System Expiry Date
	Date the record is no longer part of the database. This is only populated in the history tables otherwise it will be null except for code tables.			
15	TYPE_OTHER_DESCR	VARCHAR2(60)	No	Type Other Description
	If the EXT_REF_TYPE_CODE is 'OTHER', the TYPE_OTHER_DESCR is mandatory, otherwise it must be null.			
16	SOURCE_SCALE	VARCHAR2(15)	No	Source Scale
	The scale of the base used to record the location of the feature. eg. 1:10,000 1:20,000 1:250,000			
17	SOURCE_TYPE_CODE	VARCHAR2(4)	No	Source Type
	The type of the base used to record the location of the feature.
